

Course Description of Math –Kindergarten

Students learn to use math in normal daily activities. This reinforces the idea that math is not just an abstract exercise done at school but a valuable tool that is used many times each day. Examples of the use of math in daily activities include:

- Money transactions
- Telling time
- Using a calendar
- Measuring quantities
- Finding patterns and using the pattern to predict what comes next.

Students learn from Math-Kindergarten

- Learn to recognize the numerals 0 through 20.
- Know that numbers have an order and be able to count easily.
- Relate numbers to quantities in real life.
- Know comparative measurement terms.
- Develop a vocabulary for the names of common geometric shapes.
- Know that quantities of items can be measured and the measurement can be expressed as a number.
- Recognize that recurring patterns occur in real life.
- Begin to manipulate numbers by simple addition and subtraction.
- Recognize the meaning of addition and subtraction.
